

THOMAFILL

THOMAFILL is a controlled, low-strength, proprietary blend of sand and cementitious material that is designed to flow seamlessly as a self-leveling and self-compacting construction product. It can be batched to accommodate a wide range of applications that traditional aggregate base compaction methods are unable to achieve. It can be used in conjunction with THOMACOLOR for easy identification purposes, i.e., red and yellow.

Excavatable and non-excavatable options are available.

Applications (Commercial and Residential Use):

- Abandoning sewer systems
- Utility work, i.e., duct bank
- Line storm drainage ditches for erosion control
- Pavement base
- Soil stabilization
- Erosion control
- Filling voids
- Ensures soil sufficiency

Benefits:

- Can be placed in any condition
- Economical alternative
- Other compaction aggregates
- Controllable set times
- Eliminates checks for settlement issues
- Good fluidity
- Ensures compaction sufficiency
- Eliminates compaction equipment
- Access to hard-to-reach places where compaction is needed
